

TSTM Metering Solutions: **ACCURATE. RELIABLE. SAFE.**

TSTM provides revolutionary metering products – helping you improve safety and revenues through more accurate and reliable electrical metering. TSTM offers a wide range of equipment to best meet your metering challenges.

VT Packs™

Improve metering safety and accuracy with TSTM's VT Pack™ voltage transformer arrays.

When compared to conventional non-toroidal separate transformers that are hand-wired on-site, VT Packs contain all three transformers in a convenient, sealed enclosure that is lighter, easier and quicker to mount. They cost less and are guaranteed against failure when installed properly. They're virtually indestructible to the elements and there is less risk to employees.

VT Pucks™

The VT Puck by TSTM, Inc. is a large 0.6 kV Class voltage transformer suitable for revenue metering applications. The primary use for this transformer is to power the phase that has power line carrier AMR/AMI technology connected having difficulty communicating due to excessive noise or harmonic interference. The design of this epoxy encapsulated, short, cylindrically shaped transformer has multiple mounting provisions for both internal and external mounting applications.

Sockets

When you use TSTM sockets and harnesses, you eliminate the likelihood of wiring errors. These compact sockets are designed to be easily configured for 3-wire or 4-wire services. Plus, the pre-wired design eliminates the need for VT mounting brackets and expensive transformer cabinets when used to house our VT Pack voltage transformers.

Meter Adapters

Lightweight, TSTM's meter adapters are designed to work with a variety of meters. Self-contained toroidal autotransformers reduce AMR voltage from 480 to 240. Quick, easy, hyper-reliable.

TSTM Hockey Puck™ Auxiliary Transformers

Quickly gaining legendary status for reliability and power line carrier signal acuity, our Hockey Puck™ Auxiliary Power Transformers are similar to our precision series of VT products, but are for cost-effective general uses like TWACS® transmitters, L&G/Hunt endpoints, modems, load management receivers and a wide range of other electrical equipment. Hermetically sealed and easily installed in or out of the cabinet, they economically provide the same protection against failure as our precision VT products do in more stringent voltage-transformer applications.

Accessories

TSTM also offers power and wire harnesses, mounting kits and brackets, jumper plugs, connector covers, terminal block and backer strips.
